1. **Introduction**
   a. This document serves as a complete coding style of the Spotify GO project.

2. **Source file basics**
   a. File name
      i. The source name consists of camelcase with the .js extension.
   b. File encoding: UTF-8
      i. Source files are encoded in UTF-8.
   c. Whitespace characters
      i. Outside of strings, whitespace is used to space operators, except for attributes within HTML tags
      ii. Tab characters are used for indentation
   d. Variable types
      i. Modifiable variables are to use the let keyword
      ii. Constant variables are to use the const keyword

3. **Source file structure**
   a. Have relevant names for each JS file.

4. **Formatting**
   a. Braces
      i. Braces are always used
   b. Empty Blocks
      i. Can be a thing
   c. Block Indentation
      i. 2 spaces
   d. One statement per line
   e. Column Limit
      i. No limit at the moment
   f. Line Wrapping
      i. Line Wrapping can occur
   g. Comments
      i. Double slash comments with single line comments
      ii. Block comments with multi line comments

5. **Language features**
   a. Variable declarations
      i. Use 'const' or 'let'
         1. No 'var'
      ii. One variable per declaration
      iii. Declare when needed, but initialize as quickly as possible
   b. Array Literals
      i. Use commas when separating elements

6. **Naming**
    a. Camel case for classes, methods
    b. Underscores for variables

7. **JSDoc**
    a. Write descriptive/nice, commonsensical comments.

8. **Policies**
    a. Anything goes as long as code compiles and runs on every developer's device
        i. Deprecation, warnings, etc. are all ignored as long as app runs
